

# The New CHALLENGE

Intrecci is both the tale and the weave, the word and the hand we use to add colour to these times, with stories and products.

Conceived in accordance with the philosophy and practice of sustainability, two lines of thought and action that characterise the Fiscatech brand, Intrecci features a series of dedicated offerings for the world of footwear, leather goods and apparel.

Fabric is the absolute protagonist of Intrecci: made from GRS certified yarns, guaranteeing production chain circularity, the result of a process that combines trendy textures and colours with high technical content finishings.

The experience and technologies of Sogetec and Fiscagomma have merged to create Fiscatech. Since 1964, both companies have been leaders in the production of innovative technical materials. All products are compliant with the REACH regulation: printed, tumbled, embossed items, non-woven fabrics, coagulated, laminated materials, microfibres, latex foams, plant-based renewable polyurethanes that are solvent free and recyclable, for responsible and sustainable fashion.

For Fiscatech, innovation means creativity, skill, product quality and clientèle service, with a toxin-free product offering. It also means market analysis, to intercept new trends and needs and satisfy them with successful, 100% Italian-made items that respect the environment, human health and animals.

The use of clean energy generated by photovoltaic plants which reduce CO2 emissions in the atmosphere are concrete proof of this.

ISO certifications: 9001:2008 – ISO 14001:2004 and OHSAS18001:2007 guarantee high quality and safety standards for the environment and human health.

# FABRICS

Intrecci presents a vast range of fabric items all made from GRS certified yarns, guaranteeing production chain circularity.

From the jacquard weave to gros grain, we have developed a complete and captivating offering, in line with the latest fashion trends.

# TECHNICAL CHARACTERISTICS

Products from the Intrecci Line are characterised by excellent water resistance, thanks to innovative finishing treatments which guarantee excellent water-repellence and resistance to home washing, entirely PFC Free.

Breathable and waterproof finishings can be added for technical use, or treatments with bio-based materials, entirely solvent free, according to intended use.
